For Immediate Release

Wattle Dam Milling Update

Ramelius Resources Limited (ASX Code: RMS) is pleased to announce that milling of the high grade development ore parcel from the Wattle Dam Gold Mine, near Kambalda in Western Australia, continues to produce excellent results.

Preliminary results for the parcel to date are shown in the Table below:

Dry Tonnes Milled	Estimated Head Grade g/t Au	Estimated Gold Recovered in Ounces
13,174	30	12,326

A further 1,000 dry tonnes of high grade material will be milled over the next few days.

To date approximately 70% of the gold production from development ore has reported as gravity gold (gold that is recovered prior to the leaching process).

The estimated mine grade for this parcel was 11.5 g/t Au, or a total of 4,800 ounces for the 13,174 dry tonnes. The difference in actual gold production is in line with the overall results from the previous open pit mining at Wattle Dam of between 2 and 3 times.

The results from this parcel indicate that Wattle Dam has the potential to deliver significantly more gold than its estimated production of 68,000 ounces.

A fully reconciled report of the grade of the development ore will be released by the end of December 2009, once all gold bullion has been received.

Development at Wattle Dam is on schedule to commence stoping ore early in January 2010.
