## Super gold grades in new WA mine results

Super gold grades of up to 819 grams per tonne have been announced by Ramelius Resources Limited (ASX code: "RMS") for its Wattle Dam gold mine in Western Australia's eastern Goldfields.

The results, from further diamond drilling from the decline into the first ore body scheduled to be mined shortly, include what Ramelius Chief Executive Officer, Mr Ian Gordon, described today as "spectacular visible gold".

They also include strong results from deeper diamond drilling to test interpreted repetition of the mine's current high grade mineralised zone, but 100 metres below the current mine plan.

"These are excellent resource definition enhancements at a time we are completing the transition from open-pit to underground mine with a start to first processing of development ore from October," Mr Gordon said.

"The new intersections are significant grades and include super grade results and spectacular visible gold at 37.5 metres in the main resource mining target, with assays pending for that hole," he said.

"The deeper diamond drilling result refreshes our confidence that further high grade gold resources continue at depth at Wattle Dam and as such, we are maintaining the drill momentum to extend this zone."

The new results from pit and underground diamond drilling at the top of the resource include:

- 0.6m @ 819 g/t Au in diamond hole WDUD0010
- 7m @ 36.9 g/t Au in diamond hole WDUD0011
- 6m @ 5.2 g/t Au in diamond hole WDUD0015

These are in addition to recent drilling in the same resource area which returned:

- WDDH0077 - 9 metres at 32.3 g/t Au from 39 metres
- WDDH0079 - 3 metres at 138.9 g/t Au from 37 metres
- WDDH0081 - 5 metres at 75.8 g/t Au from 37 metres

In the priority zone's deeper diamond drilling, significant intercepts in hole WDDH0084 included:

- 3.5 metres at 13.8 g/t gold from 353 metres including 1.2 metres @ 37.0g/t Au from 353.8 metres.
