For Immediate Release

MT MAGNET GOLD PLANT BACK AT 100% CAPACITY

The Board of Ramelius Resources Limited (ASX:RMS) is pleased to provide the following update on its Mt Magnet gold operation in Western Australia.

On Saturday, 8th February 2014, the reconditioned 1,650kW electric motor that drives the ball mill at Mt Magnet's Checkers gold processing plant was re-installed and is operating as expected. This has returned the processing plant to 100% capacity, after operating for the past three months at approximately 85% capacity.

Mining at the Western Queen South open pit has continued uninterrupted since remediation of the wall slip late in 2013 and an estimated 27,000 tonnes @ 4.0g/t was mined in January 2014. Mining is expected to be complete by the end of February 2014 with a further 40,000 tonnes @ 4.1g/t to be extracted and stockpiled. Approval for larger road-train configurations has been received and haulage tonnages increased to a level where Western Queen South high grade ore will now contribute approximately 20% of total tonnes processed at Mt Magnet until June 2014.

Further details will be provided in the March 2014 Quarterly Activities Report.
