For Immediate Release

Spectacular Gold Intersection at Wattle Dam

The Directors of Ramelius Resources Limited (ASX:RMS) are pleased to announce that a recent infill drill hole WDUD0246, at its wholly owned Wattle Dam mine in WA, has intersected the best visible gold seen to date from diamond drilling within the mine.

The intersection illustrated below contains spectacular visible gold over a 20cm section and is estimated to contain more gold, when compared to the previous highest diamond hole intercept of 1500 g/t over 1m in WDUD0167. Assays for this new intersection are pending.

Photograph: Visible gold in diamond hole WDUD0246 at the 100mRL (240m below surface)
Note: Both outer sides of the cut core shown

Ramelius is completing selected infill drilling in Block C at Wattle Dam whilst a new drill position is established at the base of the mine for further drilling below Block D.
