FURTHER OPTIMISATION

MINING/PROCESSING STUDIES & RESOURCE CONVERSION

➤ Mount Magnet

- Galaxy (Saturn, Mars, Titan & Hill 50) – underground studies to look at options to convert approximately 470koz of existing mineral resources into the LOMP
- Morning Star – underground study to consider the 79koz mineral resource currently at depth as well as other nearby opportunities
- Eridanus/Shannon/Stellar – continue work on the bulk underground option at Eridanus as well as accelerate extensional drilling at Shannon and considering underground opportunities below the high-grade pod at the base of the Stellar pit
- Processing facility – the processing plant, currently operating between 1.9-2.0Mtpa, has previously operated up to 2.4Mtpa with additional secondary crushing, ball mill and leach tank capacity being decommissioned in the early 2000's. Cost/benefit analysis on upgrade which, based on previous studies, could be carried out for less than A\$20M.

➤ Edna May

- Underground – carry out study on bulk underground option and compare to current high-grade lode only mine plan which focuses primarily on the Fuji and Jonathan lodes
- Stage 3 Open Pit – re-visit the large cutback on the original Stage 2 pit to potentially unlock over 500koz of mineral resources which would potentially secure mine life at Edna May for up to 10 years
